Investigating International Relations

Instructor: Joseph O'Mahoney
Office: 105 McQuaid Hall
E-mail: joseph.omahoney@shu.edu
Office Phone: (973) 275-2518

Class: Wednesday 14:00-16:30 in DH82
Office Hours: Thursday 15:00 - 16:50 & By appointment

Course Description

The objectives of this class are twofold. The first goal is to develop a critical understanding of the use of scientific research in the practice and academic study of international affairs. While we will consider issues central to all research and some unique to qualitative analysis, the emphasis in this class is quantitative research. Whether you are primarily interested in security, finance, development, trade, or social issues, much research that is likely of interest to you uses some form of quantitative analysis. This is equally true for policy reports published by the UN, World Bank, Brookings, RAND, or other relevant organizations. In order to be a productive participant in the world of international affairs, you need to be able to understand the assumptions that underlie quantitative analyses, to disentangle proper and improper uses of quantitative evidence, and to ask intelligent questions about the validity of quantitative measurement and statistical methods.

A second goal of the class is to equip you with the basic skills to actually perform quantitative analyses using a statistical software package (SPSS in this case). These skills include being able to use, and manipulate datasets published on the internet; to produce and interpret basic graphs and tables in an intelligent way; and to execute and evaluate the output of basic statistical models, especially regression analysis. Bear in mind that the emphasis in this class is on the analysis of data and the substantive interpretation of results. Of necessity, some concepts and relationships will be represented mathematically, but the class is not a mathematical statistics class. Those desiring more rigorous mathematical treatments are encouraged to take follow-up courses in statistical theory and econometrics.

Readings and Materials

Required readings are listed below for each class session. Most articles and book chapters will be posted online.

TEXTBOOK:
(NOTE: There is also a 3rd edition from 2008 that is a lot cheaper. However, there are some differences between the 3rd and 4th edition and I cannot guarantee that they are insignificant.)

Phillip H. Pollock III, 2011. *An SPSS Companion to Political Analysis, 4th edition*, CQ Press. (NOTE: This book is NOT REQUIRED. However, we will be using SPSS and some students might find this helpful.)

We will be using a statistical software package called SPSS. Students are able to install SPSS on their computers under Seton Hall’s license. Students may also use university computers equipped with SPSS either in the information commons area of the library on the second floor or at one of the public computer labs. You may want to purchase the software in a bundle with the Pollock textbook (available here: http://www.cqpress.com/product/BUNDLE-Pollock-Essentials-of-Political-2.html). Alternatively, there is an open-source statistical package apparently very similar to SPSS. It is called PSPP and is available here: http://www.gnu.org/software/pspp/. If you choose to rent, purchase, or download software, I am not responsible for its functionality.

We will also use a free on-line course on Probability and Statistics from the Open Learning Initiative. This is analogous to an interactive reading assignment. It is essential that you complete these modules before class. **NOTE: Previous students have said that these were very helpful but that later modules took up much more time than earlier modules. I advise you to budget your time accordingly.** I will be covering to some extent the lessons from these modules during class and illustrating them using international affairs examples but I will not repeat everything. That is: I will assume during lectures that you have completed the modules. You can learn more about the course and sign up here: http://oli.cmu.edu/courses/free-open/statistics-course-details/

**Course Objectives**

1. To familiarize students with the key principles underlying the scientific study of politics, public policy, and international affairs;

2. To enable students to undertake their own research and to thoughtfully critique the research of others;

3. To allow students to develop their skills in analyzing, and to feel comfortable working with, quantitative data;

**Requirements and Grading**

<table>

*In-class activities* Students should bring something to write with to each class session. This can be a laptop, a pen/pencil and paper, or something else. Also, students should only use their laptop or other electronic device for class-related purposes during active class time (this does not include any mid-class breaks). There is research which shows that, for example, using the internet for non-class-related activities like facebook or youtube not only leads to worse performance for the student doing these activities, but also the students to either side and behind them.

*Homework Assignments - 20%*  
There will be a variety of homework assignments during the semester. The goal of these assignments is to give you an opportunity to work through the concepts and ideas from the class and/or
practice the types of analyses that will be crucial on the midterm exam and the data analysis paper (as well as in your future lives). See additional information for the grading criteria.

**Mid-term in-class exam - 20%**
The questions will bear great similarity to those asked on the homework assignments, the exercises in the Pollock book, and to the questions asked in the on-line modules. The exam will be open book and notes. Materials are both the readings and the class notes.

**Data Analysis Paper - 30%**
Students will use data collected by others to research an international affairs topic of their choosing. This paper will have a fixed structure: it starts with a research question and ends with a regression analysis. I will distribute more specific instructions in class. The assignment is due in week 14. I will distribute appropriate data. This project may be undertaken individually or in a small group of two or (maximum) three.

**Research Design Paper - 30%**
The research design paper (15 pages) should draw on all of the material from the class as well as your knowledge of an interest in researching a substantive international affairs topic. This paper will be due during the exam period. This research design can be qualitative, quantitative or both. This is preparation for your master’s research project. You will:

- Develop an international relations research question
- Locate the question in the context of relevant literature (i.e. discuss the importance of the question for theory and policy)
- Review the relevant literature on the topic
- Outline a strategy for answering this question by addressing the following issues:
  * Operationalize the dependent variable
  * Develop a series of alternative explanations for the outcome
  * Specify the sort of evidence that will enable you to choose between those alternative explanations

**Communications Policy**
The primary mode of communication between you and I is email. I will endeavour to respond to email within 48 hours, but usually I will be able to do so within 24 hours.

**Accommodations Policy**
Students requiring special accommodation should contact Disabilities Support Services.

**Academic Integrity**
Thinking about cheating? Don’t do it. Standards of academic conduct are set forth in the School of Diplomacy’s Standards of Academic Conduct, http://www.shu.edu/academics/diplomacy/academic-conduct.cfm. By registering, you have acknowledged your awareness of the Standards, and you are obliged to become familiar with your rights and responsibilities as defined by the Standards. Violations of the Standards of Academic Conduct will not be treated lightly, and disciplinary actions will be taken should such violations occur. Please see me if you have any questions about the academic violations described in the Code in general or as they relate to particular requirements for this course.
Course Schedule

Many readings will be posted electronically. If you are unable to access a reading, please contact me in adequate time before the class session in which the reading is due. This schedule of readings may be changed with appropriate notice.

1. August 27 Introduction

Baglione, Chapter 4.

2. September 3 Social Science and Asking Questions

Pollock, Introduction.

Baglione, Chapter 2.

ASSIGNMENT #1 DUE

3. September 10 Causality and Case Studies

Examples

ASSIGNMENT #2 DUE ON SUNDAY SEPTEMBER 14

4. **September 17** Experiments, Quasi-experiments, and Observational Studies

Pollock, Chapter 4.

*Examples*

ASSIGNMENT #3 DUE SUNDAY SEPTEMBER 28

5. **September 24** Measurement and Descriptive statistics

Pollock, Chapter 1 and 2.

OLI Module 1, Examining Distributions.

6. **October 1** Association / Correlation

OLI Module 2, Examining Relationships, p.43 to p.55 [Including Linear Relationships 7 and 8. We will be covering this material again in more detail later in the semester.]

ASSIGNMENT #4 DUE

7. October 8 Foundations of Statistical Inference I
   OLI Modules 8, Random Variables, and 9, Sampling Distributions.
   Pollock, Chapter 6.

8. October 15 NO CLASS
   RESEARCH QUESTION AND DRAFT LITERATURE REVIEW DUE

9. October 22 Foundations of Statistical Inference II
   OLI Modules 11, Estimation, and 12, Hypothesis Testing.
   Pollock, Chapter 7.
   ASSIGNMENT #5 DUE

10. October 29 Midterm Exam: Research Design and Statistical Inference

11. November 5 Linear Regression I
    Pollock, Chapter 4 (review) and Chapter 8 (up to and including Dummy Variable Regression).

12. November 12 Linear Regression II
    Pollock, Chapter 8 (the rest of it).

13. November 19 Linear Regression III (Held in Computer Lab)
    Pollock Chapter 8 (review).
    ASSIGNMENT #6 DUE

NOTE: NO CLASS NOVEMBER 26 - THANKSGIVING

14. December 3 Review and Writing a Research Design
    Baglione, Chapters 5-9.
    DATA ANALYSIS PAPER DUE
